PROJECTS

News App Using API / *Html, CSS, JavaScript, Bootstrap, Firebase, News API*   Link
- Developed a news application leveraging HTML, CSS, JavaScript, and Bootstrap for frontend design.
- Designed and implemented user authentication features including login, register, and logout functionalities.
- Integrated Firebase Authentication to manage user accounts securely and facilitate seamless login and registration processes.
- Implemented session management and user authentication logic to enable secure access to personalized features and content.
- Integrated Firebase Real time database for efficient data storage and retrieval, ensuring seamless management of user and news data.

Netflix Clone / *HTML, CSS, JavaScript, The Movie Database (TMDb) API, YouTube API*   Link
- Developed a Netflix clone using HTML, CSS, and JavaScript to replicate the user interface and functionality of the popular streaming platform.
- Utilized the TMDb API to fetch trending movies and movie genres dynamically.
- Created sections for different movie genres, fetching and displaying movies based on each genre dynamically.
- Integrated YouTube API to search and embed movie trailers within the application.
- Ensured responsiveness across various devices to provide a seamless user experience.

E Commerce Site / *Html, CSS, JavaScript, Firebase, Github*   Link
- Developed a fully functional e-commerce website using modern web technologies.
- Integrated Firebase Firestore to store and manage product data, user information, and order details.
- Implemented user authentication and authorization features for secure login and registration.
- Implemented shopping cart feature, allowing users to add products to their cart, view the contents, and proceed to checkout.
- Designed responsive user interfaces for seamless browsing across devices.
